			Claims		NO
	Industria	l applicability (IA)	Claims	1-15	YES
			Claims		NO

- 2. Citations and explanations (Rule 70.7)
 - 1. An axial piston machine and a cam plate as defined in the preambles of claims 1 and 15 respectively are known from DE-A-100 30 147 (cited in the description and in the search report). DE-A-100 30 147 does not disclose a locating element mounted on the cam plate and offset with respect to the guide axis. Independent claims 1 and 15 are therefore novel.

None of the cited documents contain anything to suggest moving the cam plate laterally in order to modify the volume setting, specifically moving a locating element mounted on the cam plate.

Independent claims 1 and 15 therefore involve an inventive step.

The subject matter of claims 1 and 15 can be made and used in industry for or together with an axial piston machine.

Dependent claims 2 to 14 and 16 to 19 define preferred embodiments of the axial piston machine and cam plate of claims 1 and 15, and therefore also meet the requirements of novelty, inventive step and industrial applicability.

Box No. VII Certain defects in the international application

The following defects in the form or contents of the international application have been noted:

2. The first part of independent claim 1 defines a first locating device with form-fitting locating elements. These are explicitly referred to in the plural ("locating elements (19a, 19b)"), yet the characterising part of the same claim specifies only one locating element (19b). This inconsistency between the two parts of claim 1 creates doubt regarding the subject matter for which protection is sought, and consequently claim 1 is not clear (PCT Article 6).
